

Announcing a Research Seminar

Held by the Institute for Informatics, Logics & Security Studies

"From Natural to Artificial Cognitive Systems"

Giorgio Metta is Assistant Professor at the University of Genova and a member of the European Robot Cub project. RobotCub is a 5 years long project funded by the European Commission through Unit E5 "Cognition". The main goal is to study cognition through the implementation of a humanoid robot the size of a 2 year old child: the iCub. This is an open project in many different ways: it will distribute its platform openly, it will develop software open-source, and we are open to including new partners and form collaboration worldwide.

May 16, 2008
ILS Institute
Social Science Building, Room 262
University at Albany
11:00 a.m.

Sponsored by:
The Institute for Informatics, Logics and Security Studies
